Outline

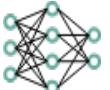

- Deep Learning 是什麼？
- 深度學習為什麼現在變強了？
- 我們這學期要學什麼？

機器學習與深度學習的關係

機器學習與深度學習的關係

Mycin 專家系統 (Stanford University)

```
(defrule 52
  if (site culture is blood)
    (gram organism is neg)
    (morphology organism is rod)
    (burn patient is serious)
  then .4
  (identity organism is pseudomonas))
```

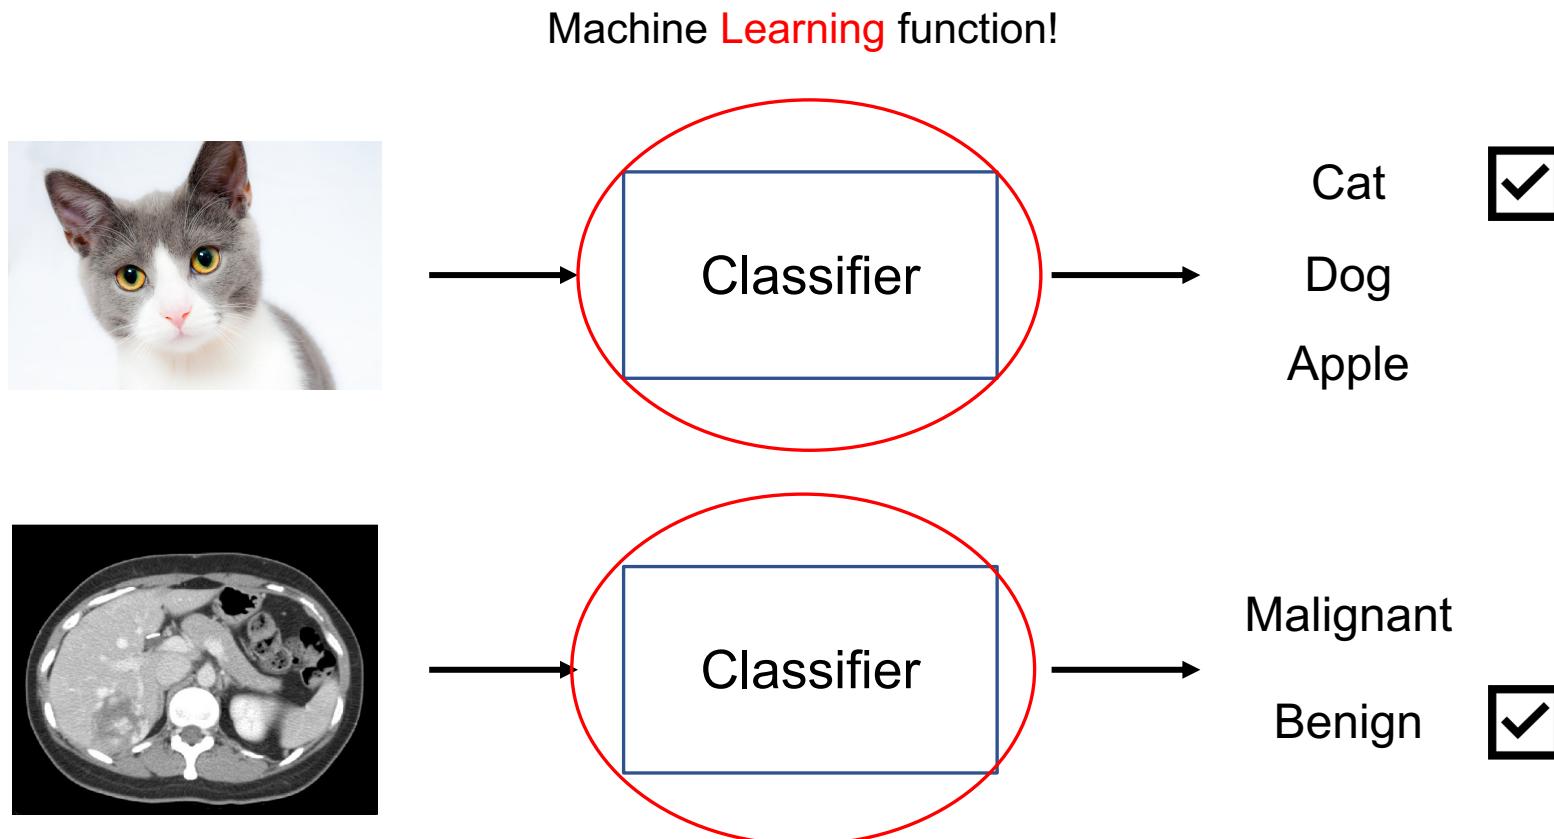

如果滿足這些條件
則有0.4的機率是綠膿桿菌

<https://www.britannica.com/technology/expert-system>

另一個廣義型專家系統：<https://en.akinator.com/>

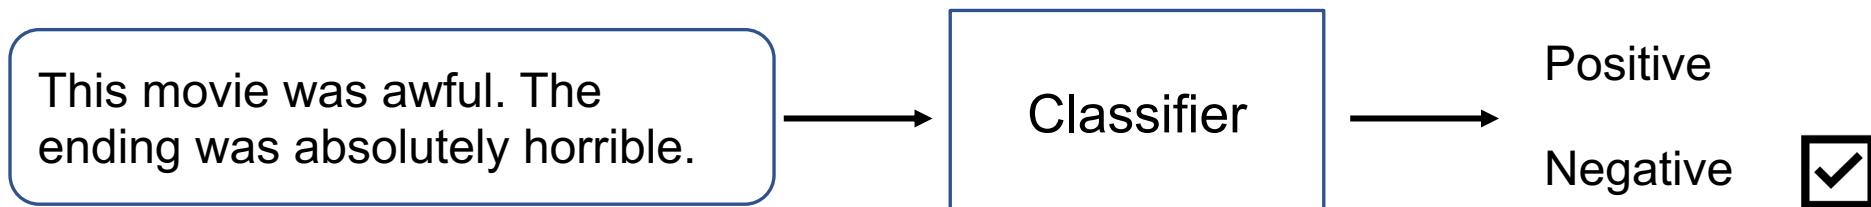

什麼是機器學習？(以電腦視覺為例)

什麼是機器學習？(以自然語言處理為例)

Sentiment Analysis (IMDb dataset [1])

Translation, EN-ZH (WMT-19 dataset [2])

[1] <https://huggingface.co/datasets/stanfordnlp/imdb>

[2] <https://huggingface.co/datasets/wmt/wmt19/viewer/zh-en>

什麼是深度學習？

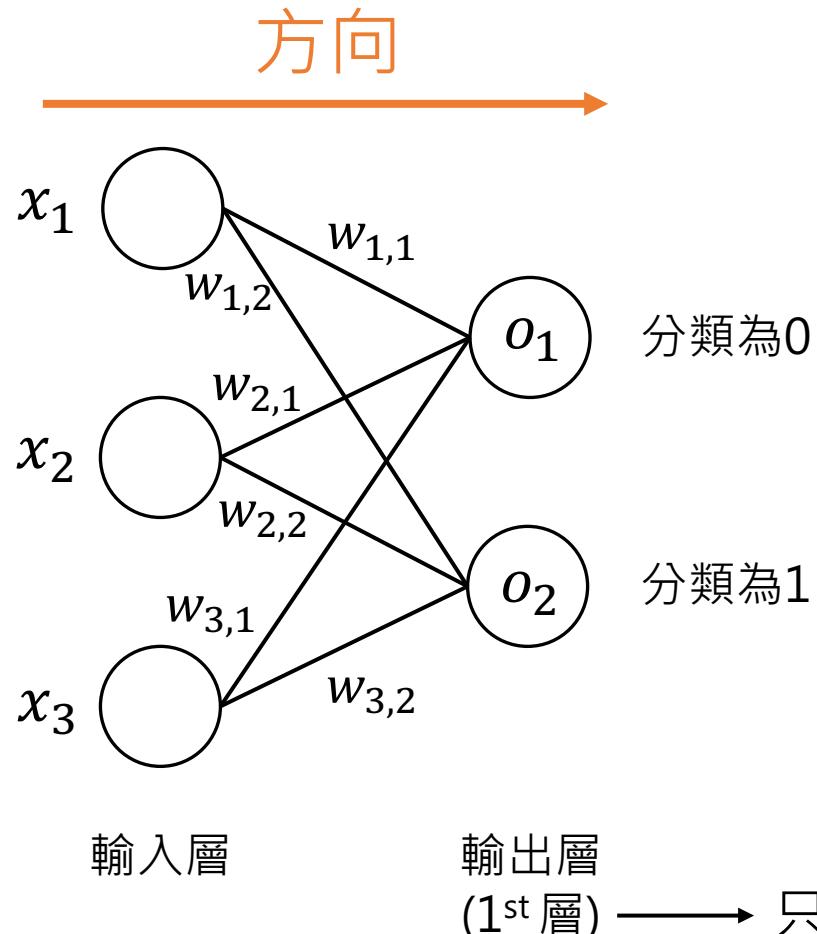

- 「深度學習」是一種機器學習方法，著重於使用多層的類神經網路 (Neural Networks) 來完成任務，例如分類、生成等等。

深度！

簡單的類神經網路 : Perceptron (感知機)

x 代表 **輸入**
 w 代表 **權重值**

代表 x 有多少比例
要被傳至下一層

$$o_1 = x_1 w_{1,1} + x_2 w_{2,1} + x_3 w_{3,1}$$

類神經網路 : Perceptron 有點像神經細胞

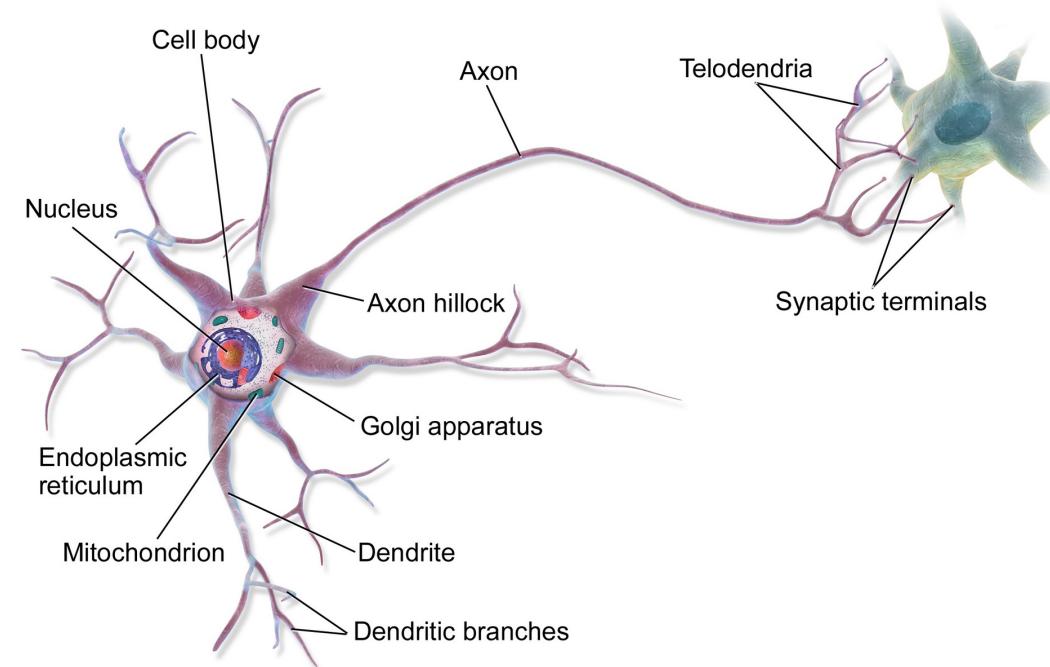

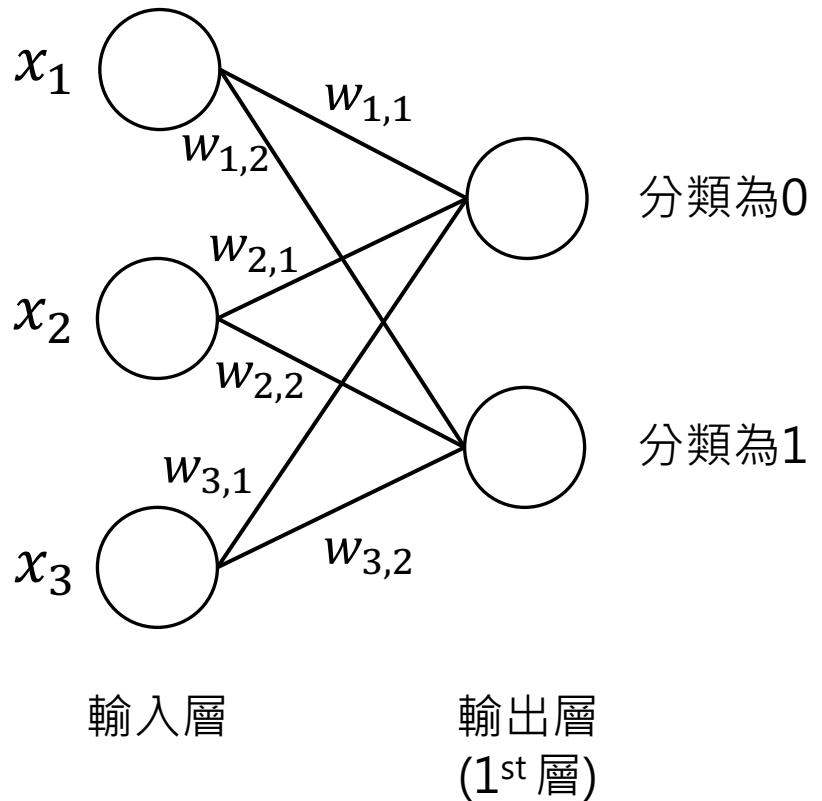

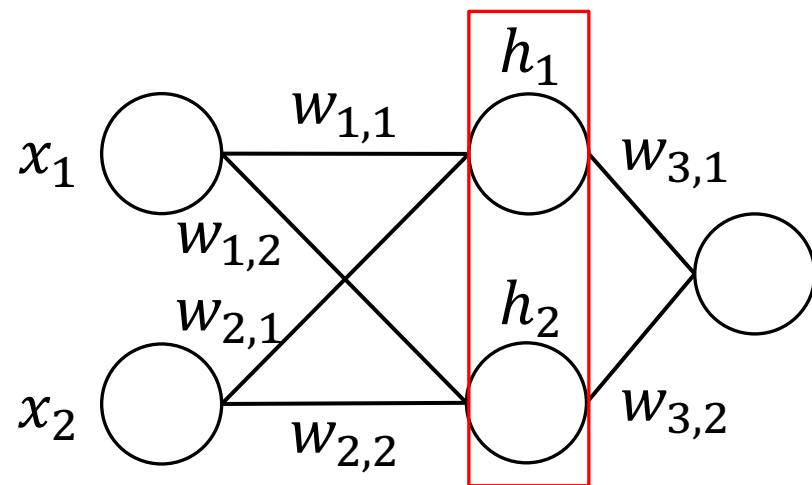

Figure source: <https://zh-yue.wikipedia.org/wiki/神經細胞>

Multi-layer Perceptron (MLP, 多層感知機)

隱藏層：不是輸入層也不是輸出層的層

輸入層

隱藏層
(1st 層)

輸出層
(2nd 層)

→ 經過兩層權重值計算 (可以被稱作多層)

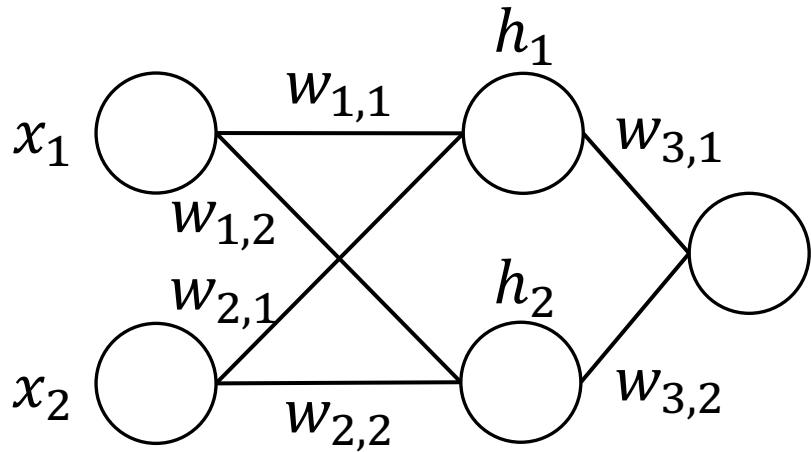

什麼是深度學習？

- 「深度學習」是一種機器學習方法，著重於使用多層的類神經網路 (Neural Networks) 來完成任務，例如分類、生成等等。
- 在深度學習模型中，通常參數數量都非常龐大，這主要來自於**隱藏層大小 (hidden size)** 與**模型層數 (number of hidden layers)** 的增加。

Deeper and Wider (加深、加寬)

Deep 真的比較好嗎？

Sun, Chen, et al. "Revisiting unreasonable effectiveness of data in deep learning era." Proceedings of the IEEE international conference on computer vision. 2017.

提到：

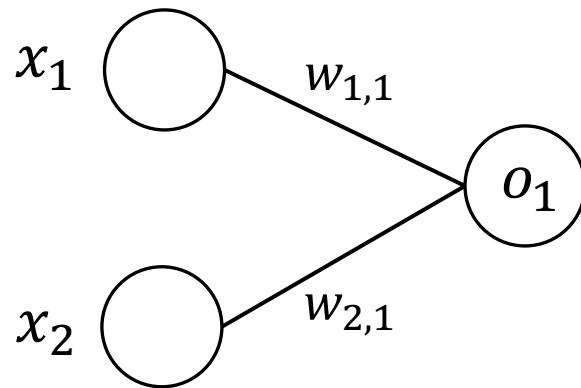

1. 資料量一樣的情況下，模型越大表現越好
2. 在模型一樣的情況下，資料量越多，表現越好

還有蠻多論文：

Kaplan, Jared, et al. "Scaling laws for neural language models." arXiv preprint arXiv:2001.08361 (2020).
Rae, Jack W., et al. "Scaling language models: Methods, analysis & insights from training gopher." arXiv preprint arXiv:2112.11446 (2021).

實驗結果以外的「理論」

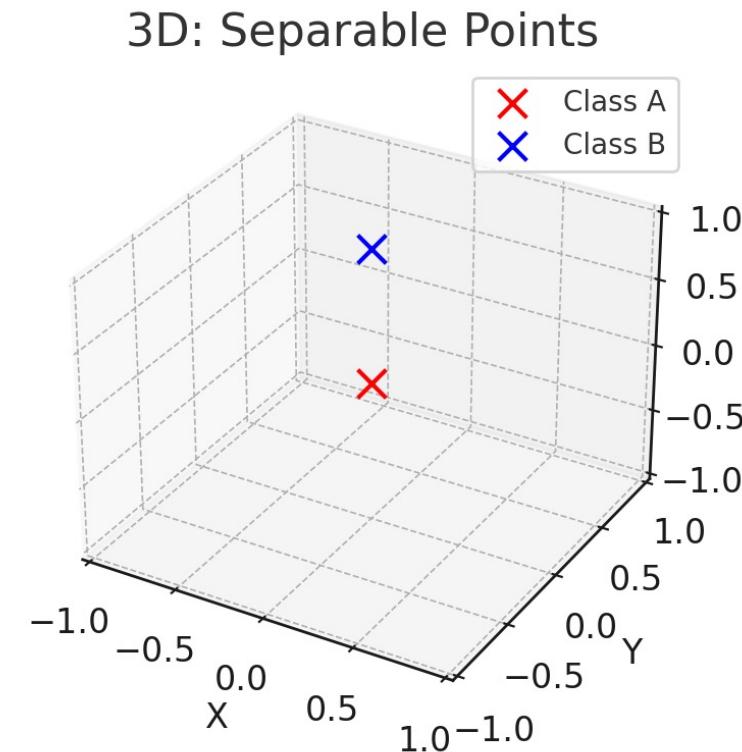

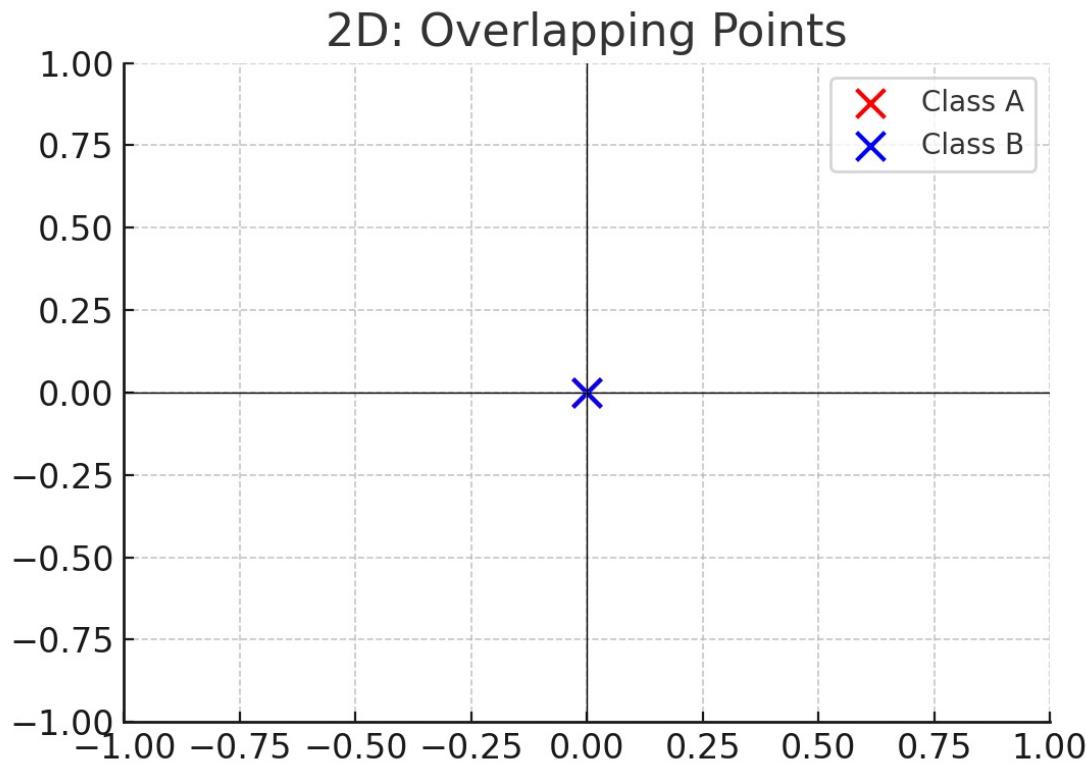

$$o_1 = x_1 w_{1,1} + x_2 w_{2,1}$$

$$\begin{aligned} o_1 &= h_1 w_{3,1} + h_2 w_{3,2} \\ &= (x_1 w_{1,1} + x_2 w_{2,1}) w_{3,1} \\ &\quad + (x_2 w_{2,1} + x_2 w_{2,2}) w_{3,2} \end{aligned}$$

實驗結果以外的「理論」

深度學習為什麼現在變強了？

Difference between AI, ML, and DL

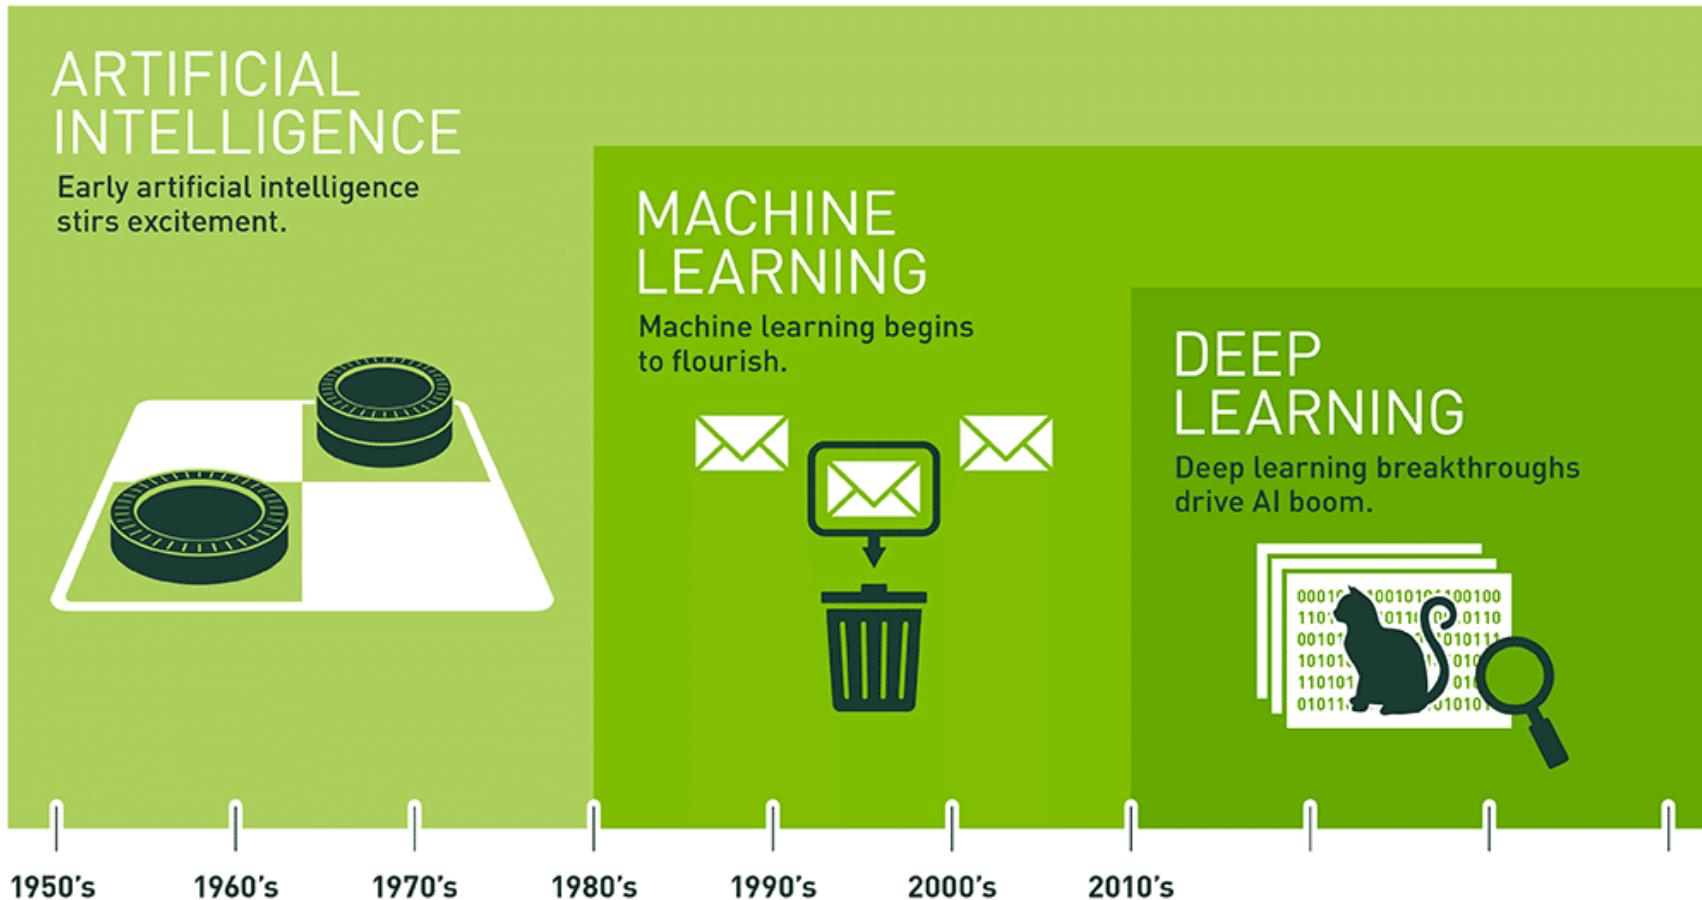

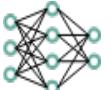

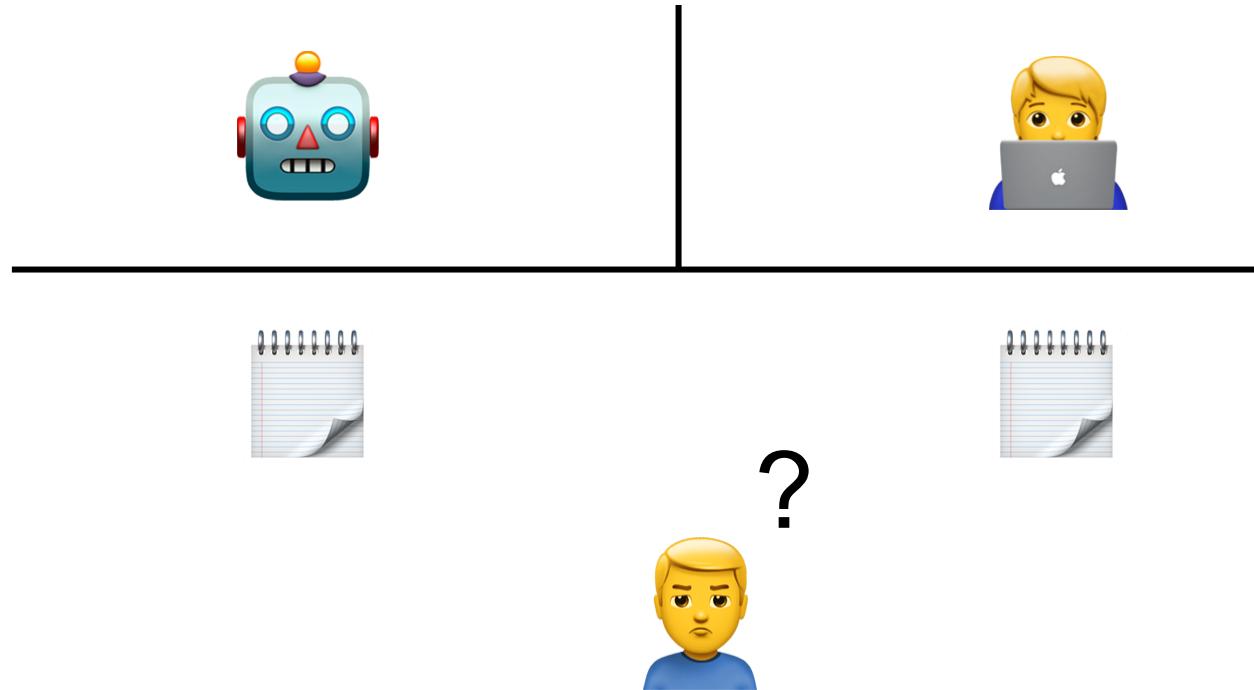

Figure source: <https://blogs.nvidia.com/blog/whats-difference-artificial-intelligence-machine-learning-deep-learning-ai/>

圖靈測試 (Turing Test)

- Proposed by Alan Turing in **1950**
- One of the earliest concepts of artificial intelligence.

The first Perceptron (1958)

Rosenblatt, Frank. "The perceptron: a probabilistic model for information storage and organization in the brain." Psychological review 65.6 (1958): 386.

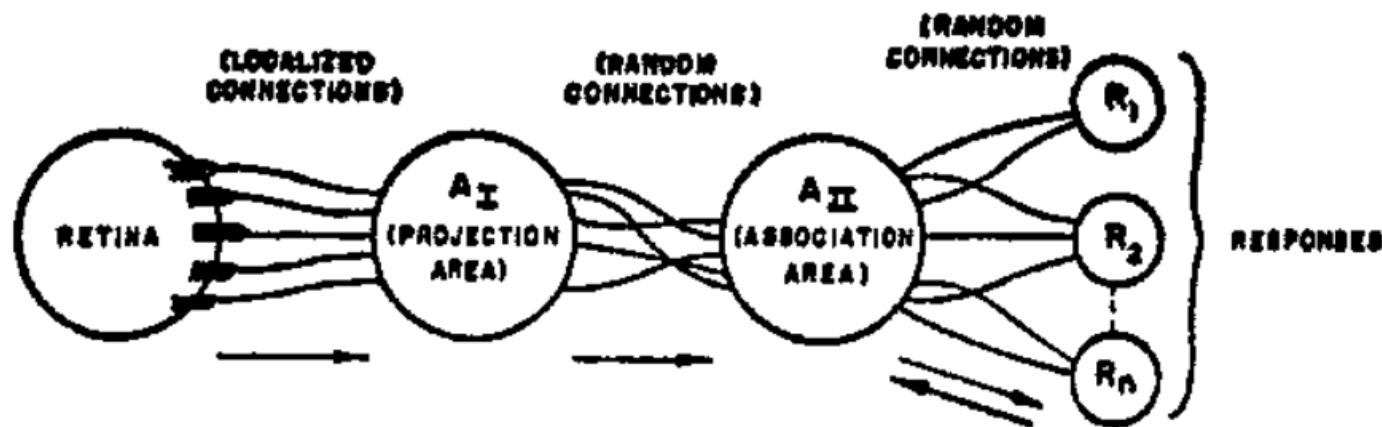

FIG. 1. Organization of a perceptron.

The First Convolutional Neural Networks: Neocognitron (1980)

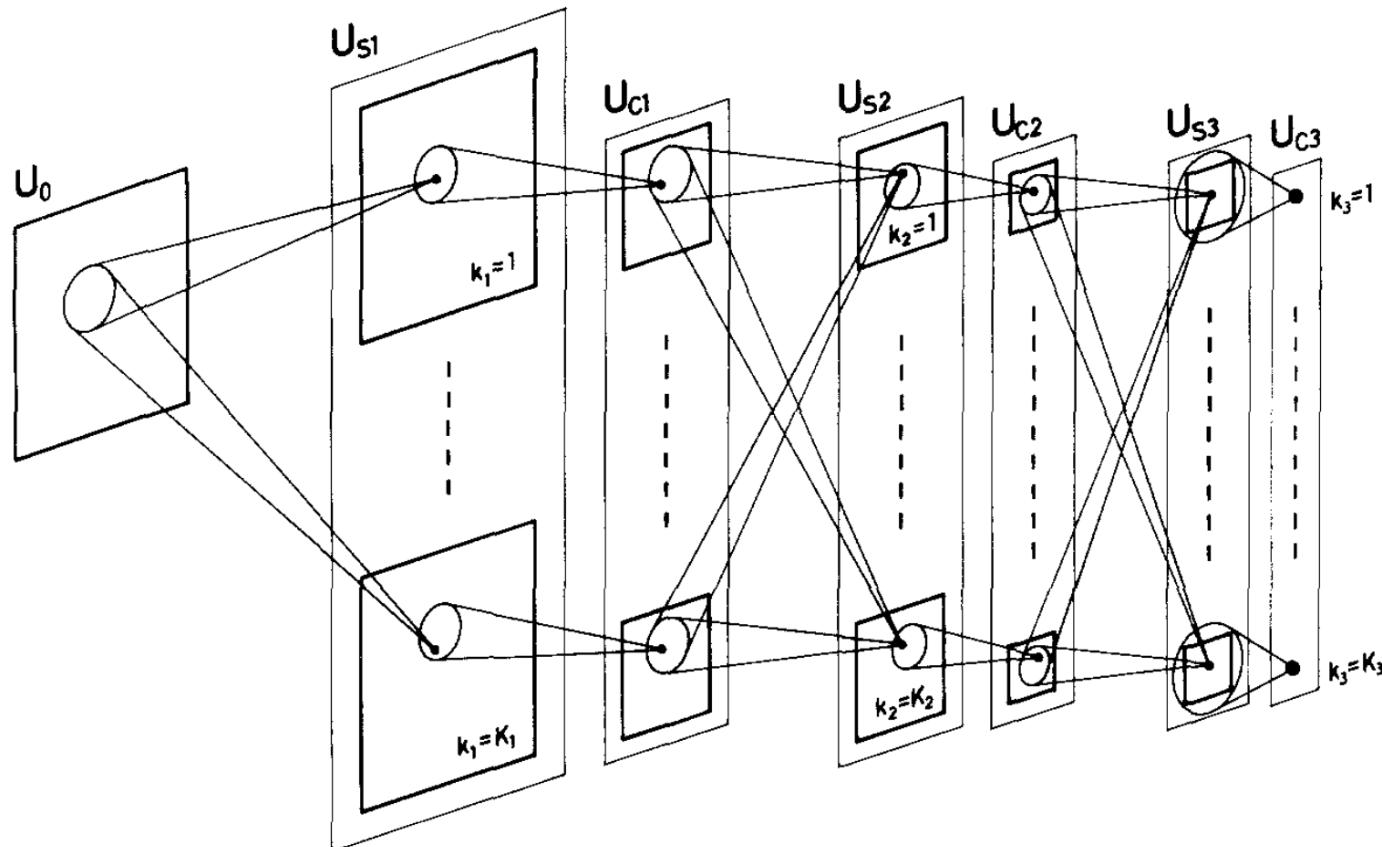

Fig. 2. Schematic diagram illustrating the interconnections between layers in the neocognitron

Fukushima, Kunihiko. "Neocognitron: A self-organizing neural network model for a mechanism of pattern recognition unaffected by shift in position." *Biological cybernetics* 36.4 (1980): 193-202.

The Back-Propagation Algorithm (1986)

Learning representations by back-propagating errors

David E. Rumelhart*, Geoffrey E. Hinton†
& Ronald J. Williams*

* Institute for Cognitive Science, C-015, University of California,
San Diego, La Jolla, California 92093, USA

† Department of Computer Science, Carnegie-Mellon University,
Pittsburgh, Philadelphia 15213, USA

We describe a new learning procedure, back-propagation, for networks of neurone-like units. The procedure repeatedly adjusts the weights of the connections in the network so as to minimize a measure of the difference between the actual output vector of the net and the desired output vector. As a result of the weight adjustments, internal ‘hidden’ units which are not part of the input or output come to represent important features of the task domain, and the regularities in the task are captured by the interactions of these units. The ability to create useful new features distinguishes back-propagation from earlier, simpler methods such as the perceptron-convergence procedure¹.

LeNet-5: Early Convolutional Neural Networks

Fig. 2. Architecture of LeNet-5, a Convolutional Neural Network, here for digits recognition. Each plane is a feature map, i.e. a set of units whose weights are constrained to be identical.

LeCun, Y., Bottou, L., Bengio, Y., & Haffner, P. (1998). Gradient-based learning applied to document recognition. Proceedings of the IEEE, 86(11), 2278-2324.

Growing Sizes of Deep Learning Models

The Revolution of ChatGPT

ChatGPT came out in November, 2022.

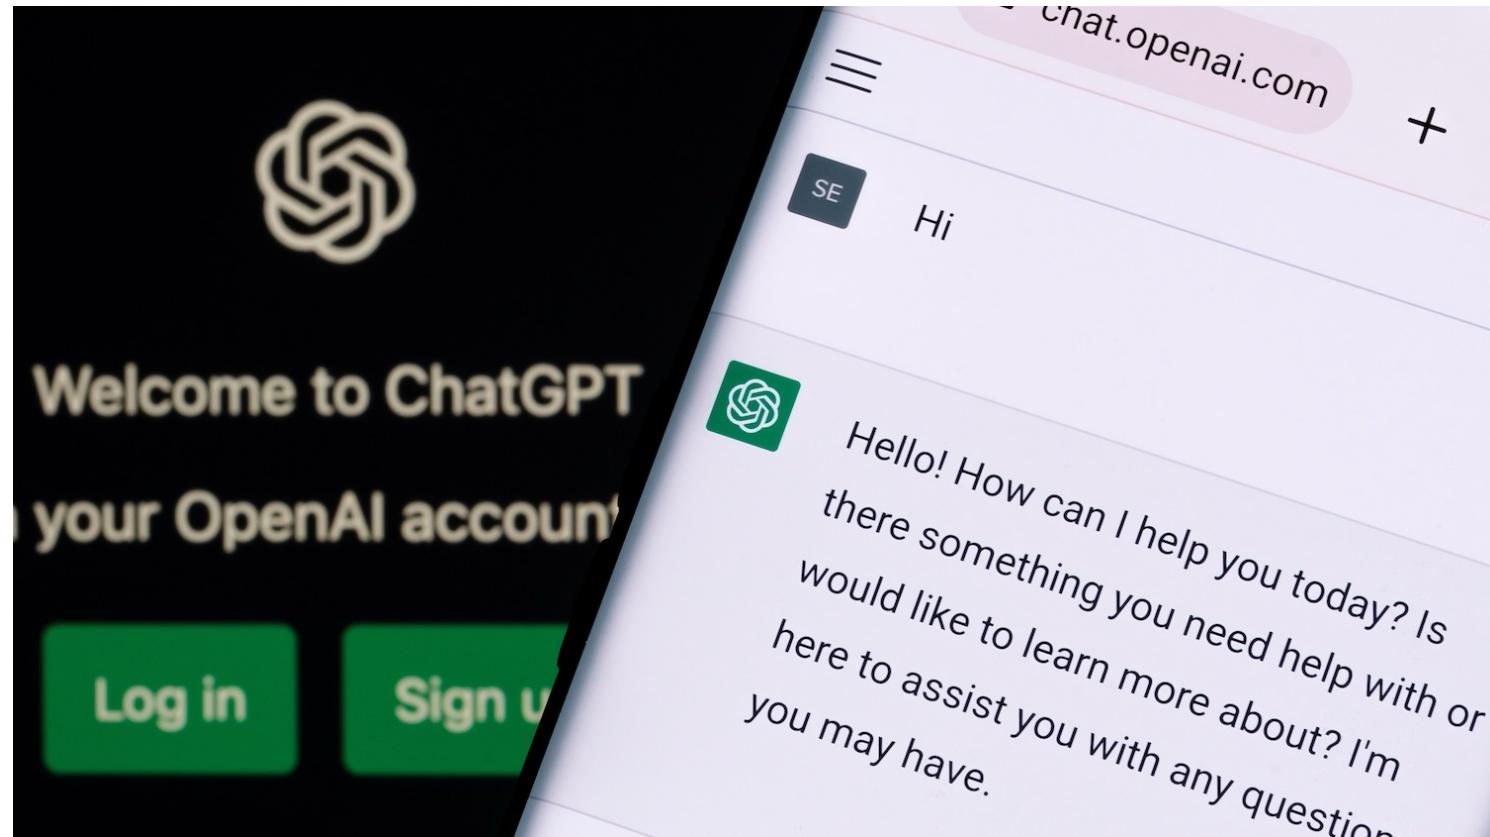

Figure source: <https://poole.ncsu.edu/thought-leadership/article/lets-chat-about-chatgpt/>
<https://openai.com/index/chatgpt/>

InstructGPT: the precursor of ChatGPT

Model size: 175B (same as GPT-3)

The screenshot shows a comparison between two language models: GPT-3 and InstructGPT. The interface has a dark background with white text. At the top right, it says "Prompt". Below that, under "GPT-3", is the instruction "Explain the moon landing to a 6 year old in a few sentences.". Under "Completion", it shows the response: "Explain the theory of gravity to a 6 year old.". Below this, there are two buttons: a left arrow and a right arrow. Between them is the instruction "Explain the theory of relativity to a 6 year old in a few sentences.". Below that is "Explain the big bang theory to a 6 year old.", then "Explain evolution to a 6 year old.", and finally "InstructGPT". Under "InstructGPT", the response is highlighted in blue: "People went to the moon, and they took pictures of what they saw, and sent them back to the earth so we could all see them."

Prompt

GPT-3

Explain the moon landing to a 6 year old in a few sentences.

Completion

Explain the theory of gravity to a 6 year old.

<

Explain the theory of relativity to a 6 year old in a few sentences.

>

Explain the big bang theory to a 6 year old.

Explain evolution to a 6 year old.

InstructGPT

People went to the moon, and they took pictures of what they saw, and sent them back to the earth so we could all see them.

Machine Learning
Classifier

Deep Learning
Classifier

模型訓練師新手村

所有的機器學習都是在做最佳化

最小化Predictions和Ground-truths之間的差異即為機器學習的目標

目標函數的別名

- 目標函數 (Objective Function)
- 損失函數 (Loss Function)
- 誤差值 (Loss)
- 可能採用「交叉熵」 (Cross entropy)

如何訓練模型：資料集

Training Set
(訓練資料集)

Test Set
(測試資料集)

Training Set
(訓練資料集)

Validation Set
(驗證資料集)

如何訓練模型：演算法

- 透過 Back-Propagation 計算神經網路中的梯度
- 透過 Gradient Descent (梯度下降) 更新權重值 (w 跟 b)

我們這學期要學什麼？

你會學到：深度學習基礎 (1)

- 神經網路與梯度下降 (含基礎線性代數與微積分)
- 反向傳播法 (Back-propagation)

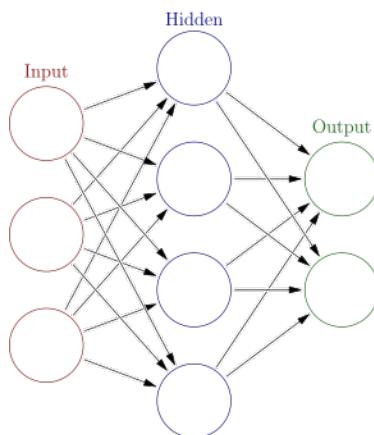

Figure source:
[https://en.wikipedia.org/wiki/Neural_network_\(machine_learning\)](https://en.wikipedia.org/wiki/Neural_network_(machine_learning))

https://www.youtube.com/watch?v=-icD_KmvnnM

你會學到：深度學習基礎 (2)

- 最佳化方法：SGD, Momentum, RMSProp, Adam
- 常見損失函數介紹 (含基礎資訊理論與機率統計)

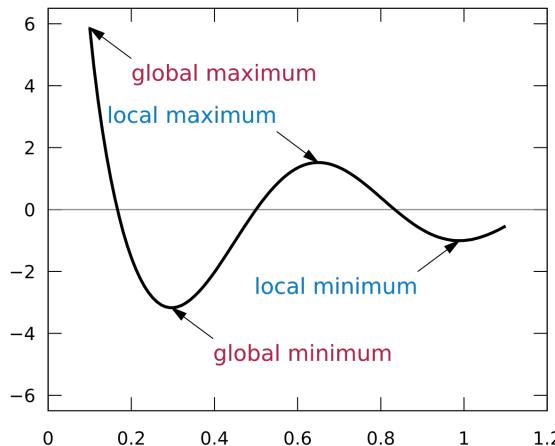

Figure source:
https://en.wikipedia.org/wiki/Maximum_and_minimum

你會學到：深度學習基礎 (3)

- Why PyTorch?

	PyTorch	TensorFlow
Developer	Meta	Google
Number of models on Hugging Face	216,295	14,415

<https://huggingface.co/models>

你會學到：深度學習應用 (1)

- (基礎) 電腦視覺
 - 卷積神經網路
 - Vision Transformers (ViT)
- 過擬合、正規化、以及模型訓練技巧

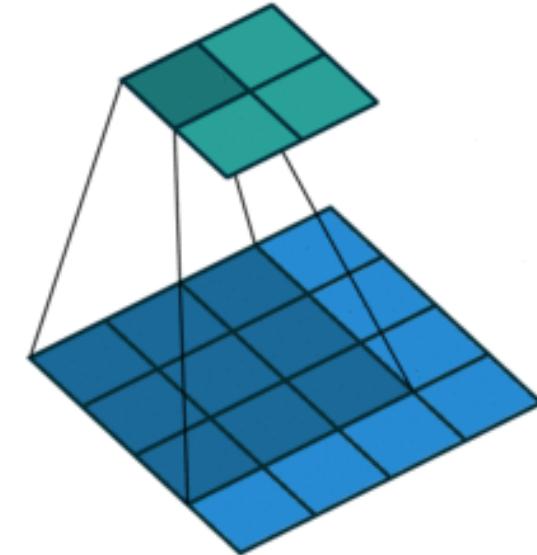

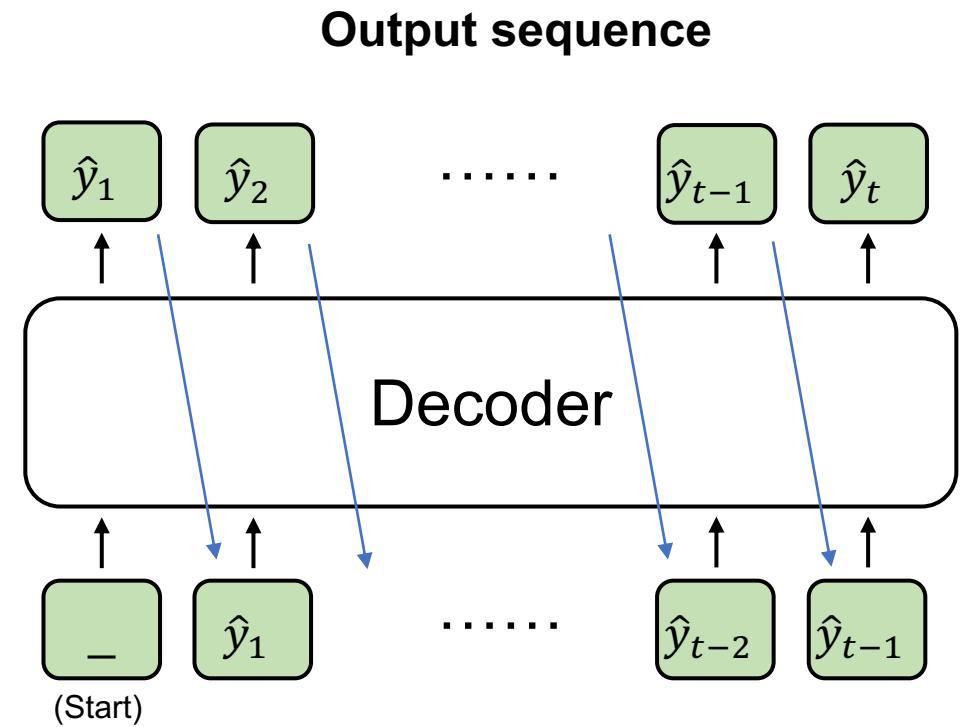

Figure source: <https://hannibunny.github.io/mlbook/neuralnetworks/convolutionDemos.html>

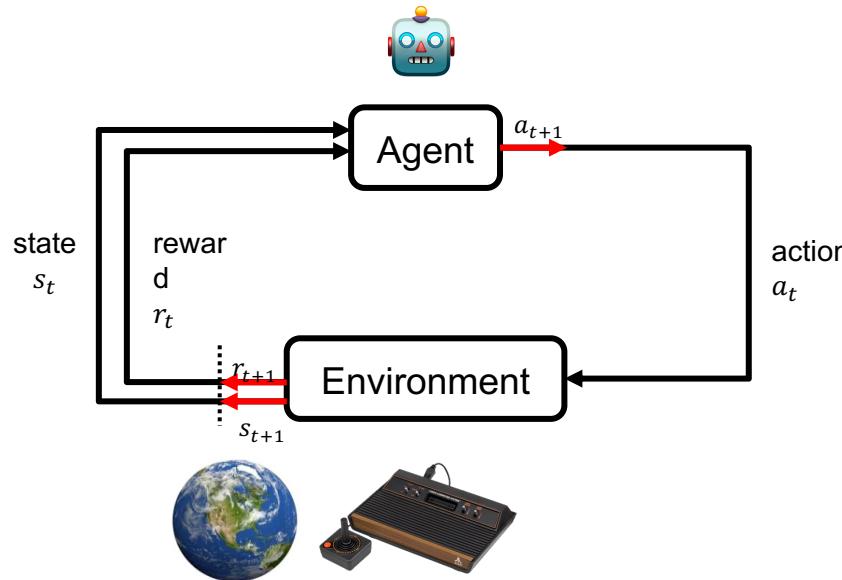

你會學到：深度學習應用 (2)

- 自然語言處理
 - RNN與序列建模
 - 自注意力機制模型
 - 自監督式學習與預訓練模型
 - 大型語言模型

你會學到：深度學習進階

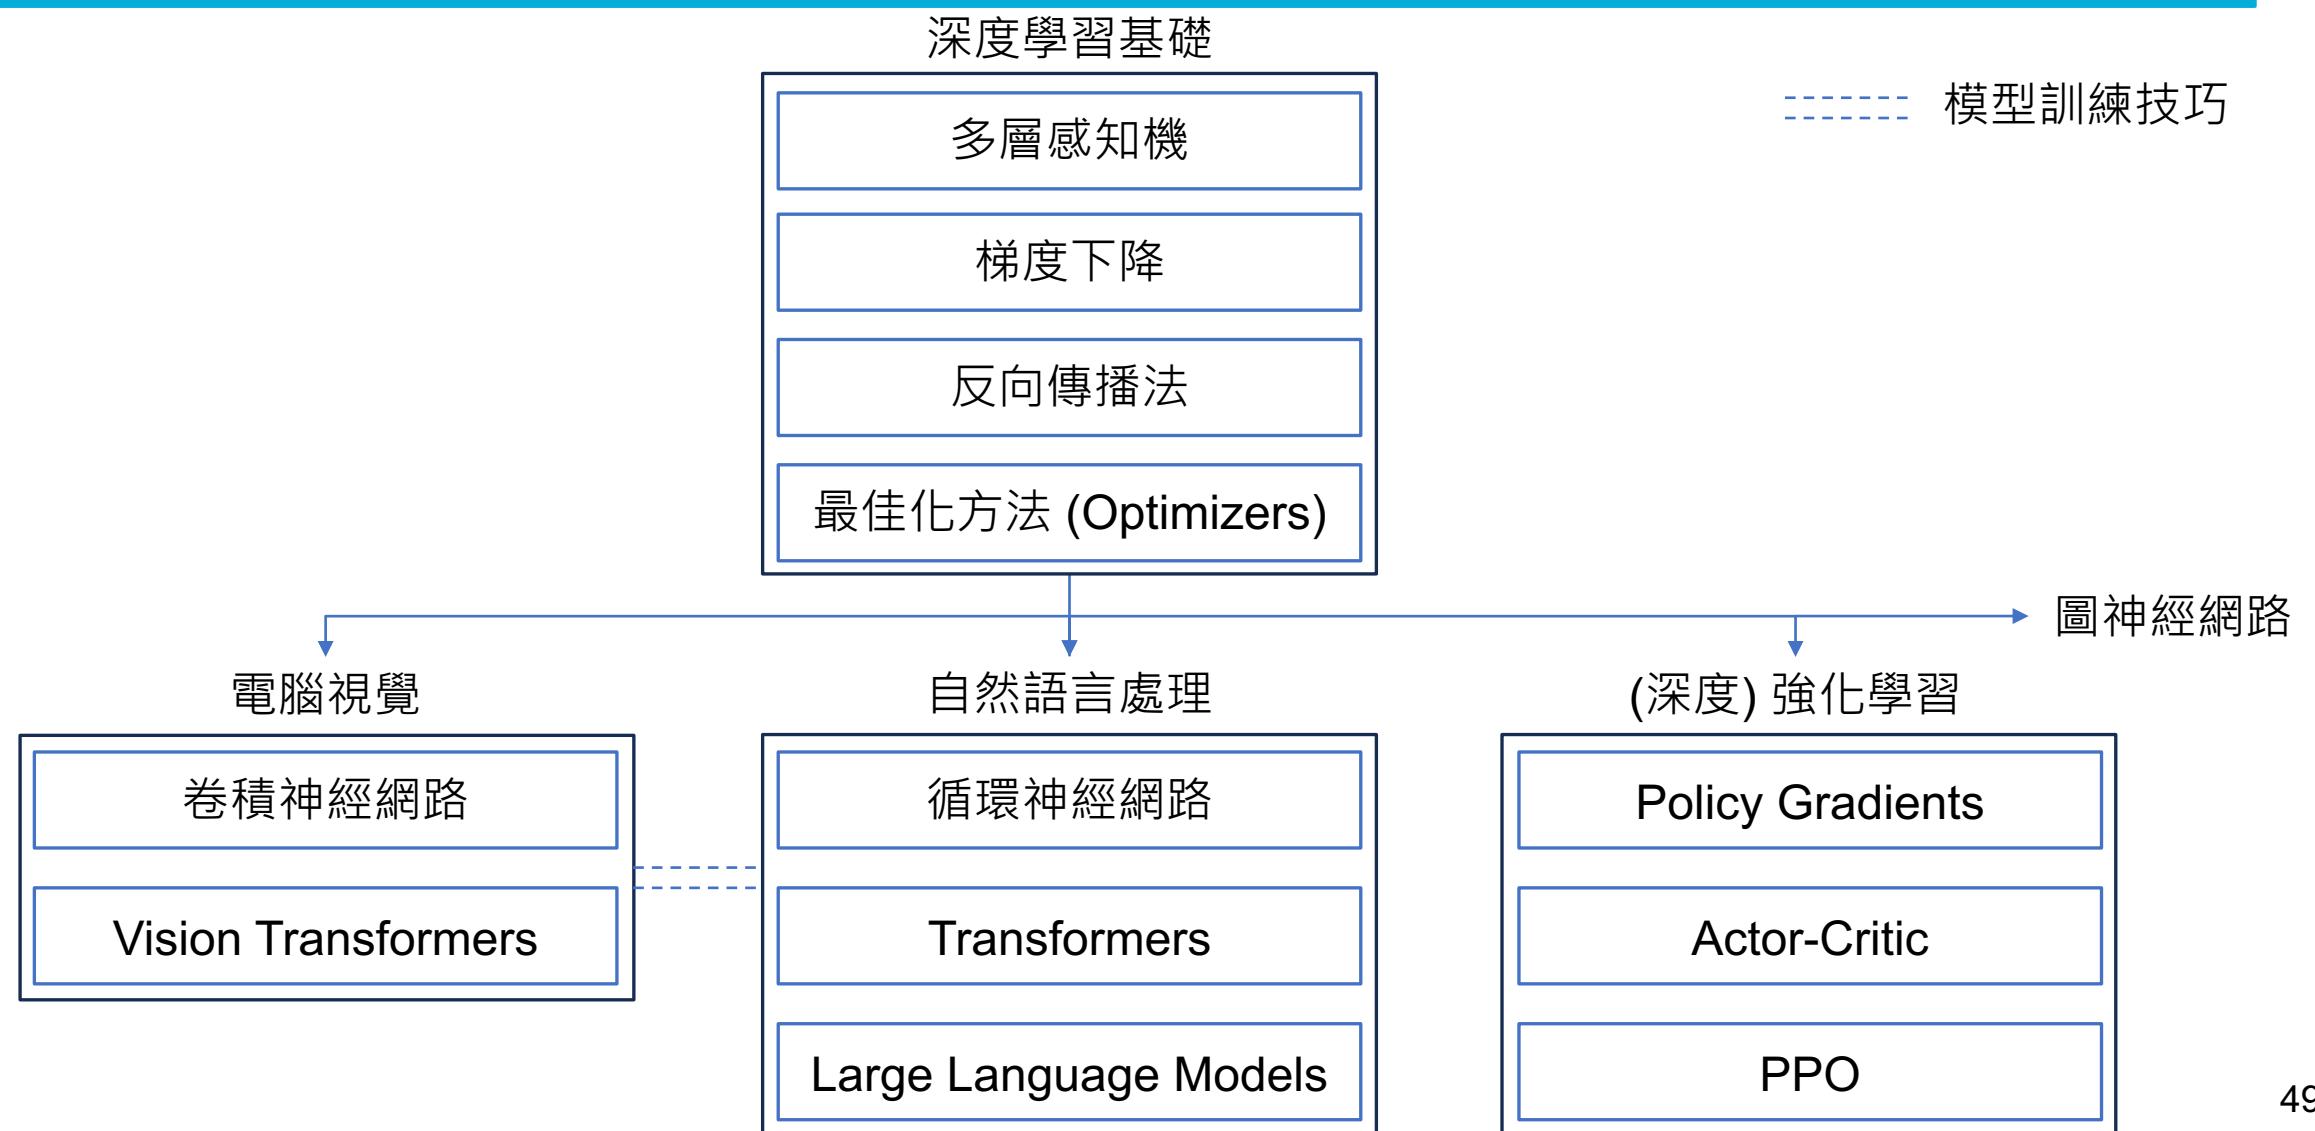

- 大模型時代如何有效率訓練模型？
- 圖神經網路
- 強化學習

(Figure from the LoRA paper)

Hu, Edward J., et al. "LoRA: Low-Rank Adaptation of Large Language Models." ICLR 2022.

深度學習課程地圖

深度學習課程的修課體感

- 並非一個完全連續的故事
- 而是可以針對不同領域有所跳躍

Scoring of this course

- Assignments: **7.5% x 4 times (30% in total)**
- Quizzes: **1% x 10 times**
- Mid-term exam: **20%**
- Final project: **40%**

About the Assignments

- 作業一定都會有範例程式碼 (Sample Code)
- 基本上是挖空程式題

作業可不可以使用AI？

- 可以使用，但不得直接複製貼上
- 若使用AI生成程式碼，須以註解形式說明，例如：

```
class MLP(nn.Module):  
    def __init__(self):  
        # 以下幾行由gpt-5生成  
        # 建構MLP的輸入層、中間層、以及輸出層  
        self.layer_1 = nn.Linear(28*28, hidden_size1)  
        self.layer_2 = nn.Linear(256, hidden_size2)  
        self.cls_layer = nn.Linear(hidden_size2, 10)  
        self.relu = nn.ReLU()
```

錯誤使用範例 (1)

請幫我寫一個影像辨識的程式碼，使用手寫字辨識資料集

已思考 25s

給你一個「可直接跑」的 PyTorch 版本，使用 MNIST 手寫數字資料集，完整包含資料下載、CNN 建模、訓練、驗證、儲存最佳模型。

安裝套件

bash

複製程式碼

```
pip install torch torchvision
```

train_mnist.py

python

複製程式碼

```
import os, time
import torch
import torch.nn as nn
import torch.optim as optim
from torchvision import datasets, transforms
from torch.utils.data import DataLoader
```

```
# ----- 超參數 -----
EPOCHS = 5
```

不建議的原因：

難以除錯，且下一步通常就是複製貼上執行，這樣的過程學不到東西

錯誤使用範例 (2)

CGU-DL-HW2-CIFAR10-cls.pdf
PDF

假設我現在已經完成程式碼作業，請幫我根據此作業需求，
寫出一份報告

好的 我已經讀過你提供的作業需求文件 。下面我會幫你草擬一份完整的報告（符合評分細則的 30% Report 部分），你可以依照自己的實作結果再補上實際數據。

Homework 2: Image Classification Report

Course: Deep Learning, Chang Gung University

Name / Student ID: (請填寫)

Date: 2025/03/31

不建議的原因：

這樣的過程同樣學不到東西

正確使用範例 (1)：實作細節討論

請問with torch.no_grad()跟model.eval()差在哪？

這兩個東西其實是不同層次的設定：

1. with torch.no_grad()

- 作用：關閉梯度計算。
- 影響範圍：包在 `with` 區塊中的所有運算。
- 用途：
 - 減少記憶體消耗（因為不用存計算圖）。
 - 加快推論速度（不用做反向傳播相關準備）。
- 例子：

python

```
with torch.no_grad():
    y = model(x)
```

複製程式碼

建議的原因：幫自己釐清觀念
藉由 LLM 學到更細部的知識

正確使用範例 (2)

請問我的程式碼哪裡寫錯了？無法執行

```
python
def load_HF_model(model_name, num_labels=2)
    model = AutoModelForImageClassification
        model_name,
        num_labels=num_labels, # Pneumonia
        ignore_mismatched_sizes=True, # http://
        problem_type="singel_label_classification"
    )
    return model
```

建議的原因：幫自己釐清觀念
加速程式除錯

你這段程式碼有一個小錯誤：

`problem_type="singel_label_classification"` 這裡拼錯了，正確應該是
`"single_label_classification"`。

修正後的程式碼如下：

期中考是什麼？

- 在電腦教室進行上機考
- 類型為 Debugging (暫定) 以及觀念題
 - 考試程式碼來自 Week4 - Week8
 - LLM 不太會
- 佔學期成績比例 20%

第九週改時間

- 原訂 10/29 13:10 – 16:00
- 改為 10/29 **16:10 – 19:00**
 - 該週 10/29 13:10 – 16:00 不上課

Final Project 是什麼？

- Final Project 是一種完整的訓練
- 你將自行從頭到尾做完一個題目，包含：
 - 資料前處理 (Data Pre-processing)
 - 模型訓練 (Model Training)
 - 模型評估 (Evaluations) -->了解問題並改進模型
- 每組人數待修課同學總數訂定，原則上1-3人/組

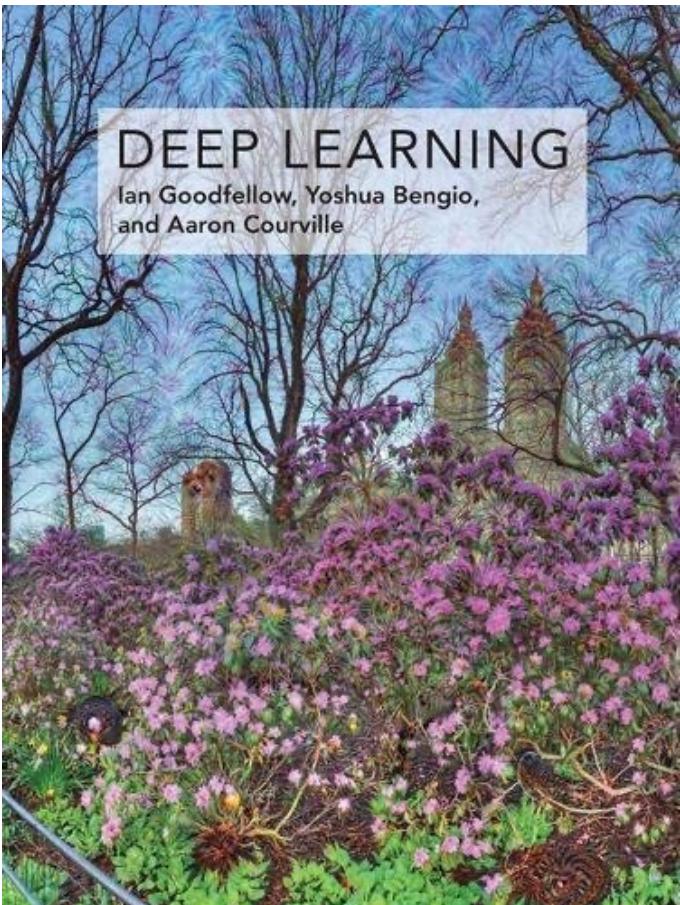

Syllabus

出作業日 /
上個作業截止日

考試

週	主題	程式教學	Note
1	深度學習介紹以及本課程綱要		
2	神經網路與梯度下降 (含基礎線性代數與微積分)		
3	反向傳播法		HW1
4	最佳化方法 : SGD, Momentum, RMSProp, Adam	PyTorch Basics	
5	常見損失函數介紹 (含基礎資訊理論與機率統計)	PyTorch Modeling	
6	卷積神經網路	CV in PyTorch (1)	HW2
7	過擬合、正規化、模型訓練技巧、期末專案介紹	CV in PyTorch (2)	
8	自然語言處理 : RNN與序列建模	NLP in PyTorch	
9	期中考		上機
10	自注意力機制模型		HW3
11	Vision Transformers (ViT) 、自監督式學習與預訓練模型		
12	大型語言模型	🤗 Transformers	
13	大模型時代如何有效率訓練模型 ?	🤗 Quantization	HW4
14	圖神經網路		
15	強化學習		
16	小組實作成果報告
